

08.06 Using Logarithms to Solve Exponential Equations

Concept summary and key formulas

Key ideas

This subsection focuses on exponential and logarithmic models.

Decide whether the unknown is in an exponent, inside a logarithm, or in a model parameter.

Key formulas

$$\begin{aligned} A(t) &= A_0 b^t \\ \log_b (x) = y &\iff b^y = x \\ \log_b (MN) &= \log_b M + \log_b N \end{aligned}$$
